## Creating a PDF File Using Adobe Acrobat Pro

Adobe developed the PDF format. Adobe Acrobat is the original PDF creator. You will have to buy Adobe Acrobat (if you have not already).

Alternatively, you can download a free trial version. The trial version can be used for a maximum of 30 days. If this is of interest, you can download a trial version at the following link:

https://www.acrobat.com/en\_us/free-trial-download.html

Start the installation of Adobe Acrobat Pro and follow the steps. After installation, Adobe PDF can be used as a virtual printer.

Go to File > Print. Select Adobe PDF from your list of printers, then select "Properties".

This concerns the Adobe PDF document properties. Select "Press quality" under the standard settings and click OK.

Then select "OK/Print" in the print window. Name the file and save it in a directory of your choice.
